

# QUICK SET UP GUIDE

## SPS-1000 Dual Bluetooth® Indoor/Outdoor Loud Speakers

### BASIC SETUP OF THE SPS-1000 SPEAKERS:

1. Determine where the ideal location would be to place the speakers. For best performance place them 8-10' apart for stereo sound. Speakers can be mounted vertically or horizontally on a wall or post.
2. The master speaker has a power cord connected to an IP68 waterproof rated AC adapter power supply that needs to connect to an ac outlet. Make sure you are close enough with the master speaker to connect to the ac outlet. The speakers will stay on unless you have a switched outlet.
3. Connect the pairing speaker using the supplied 10' speaker cable into the proper connections on the master speaker.
4. When connecting the cable make sure to match the polarity to the master speaker. Positive + to positive + (Red positive terminal) and - Negative to Negative - (Black negative terminal)

### CONNECT BLUETOOTH®

1. Make sure the speakers are plugged in and your Bluetooth® device is on. Go to settings or connections in your device and select SOUNDPRO SPS 1000 in the menu to pair to. The device will show paired if successful. Only one device can be paired at a time.
2. Functions and volume control will be controlled from Remote Control and your paired phone, tablet, other Bluetooth enabled device. It will not harm the speakers if they are left plugged in and left on.
